Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

DASHBOARD

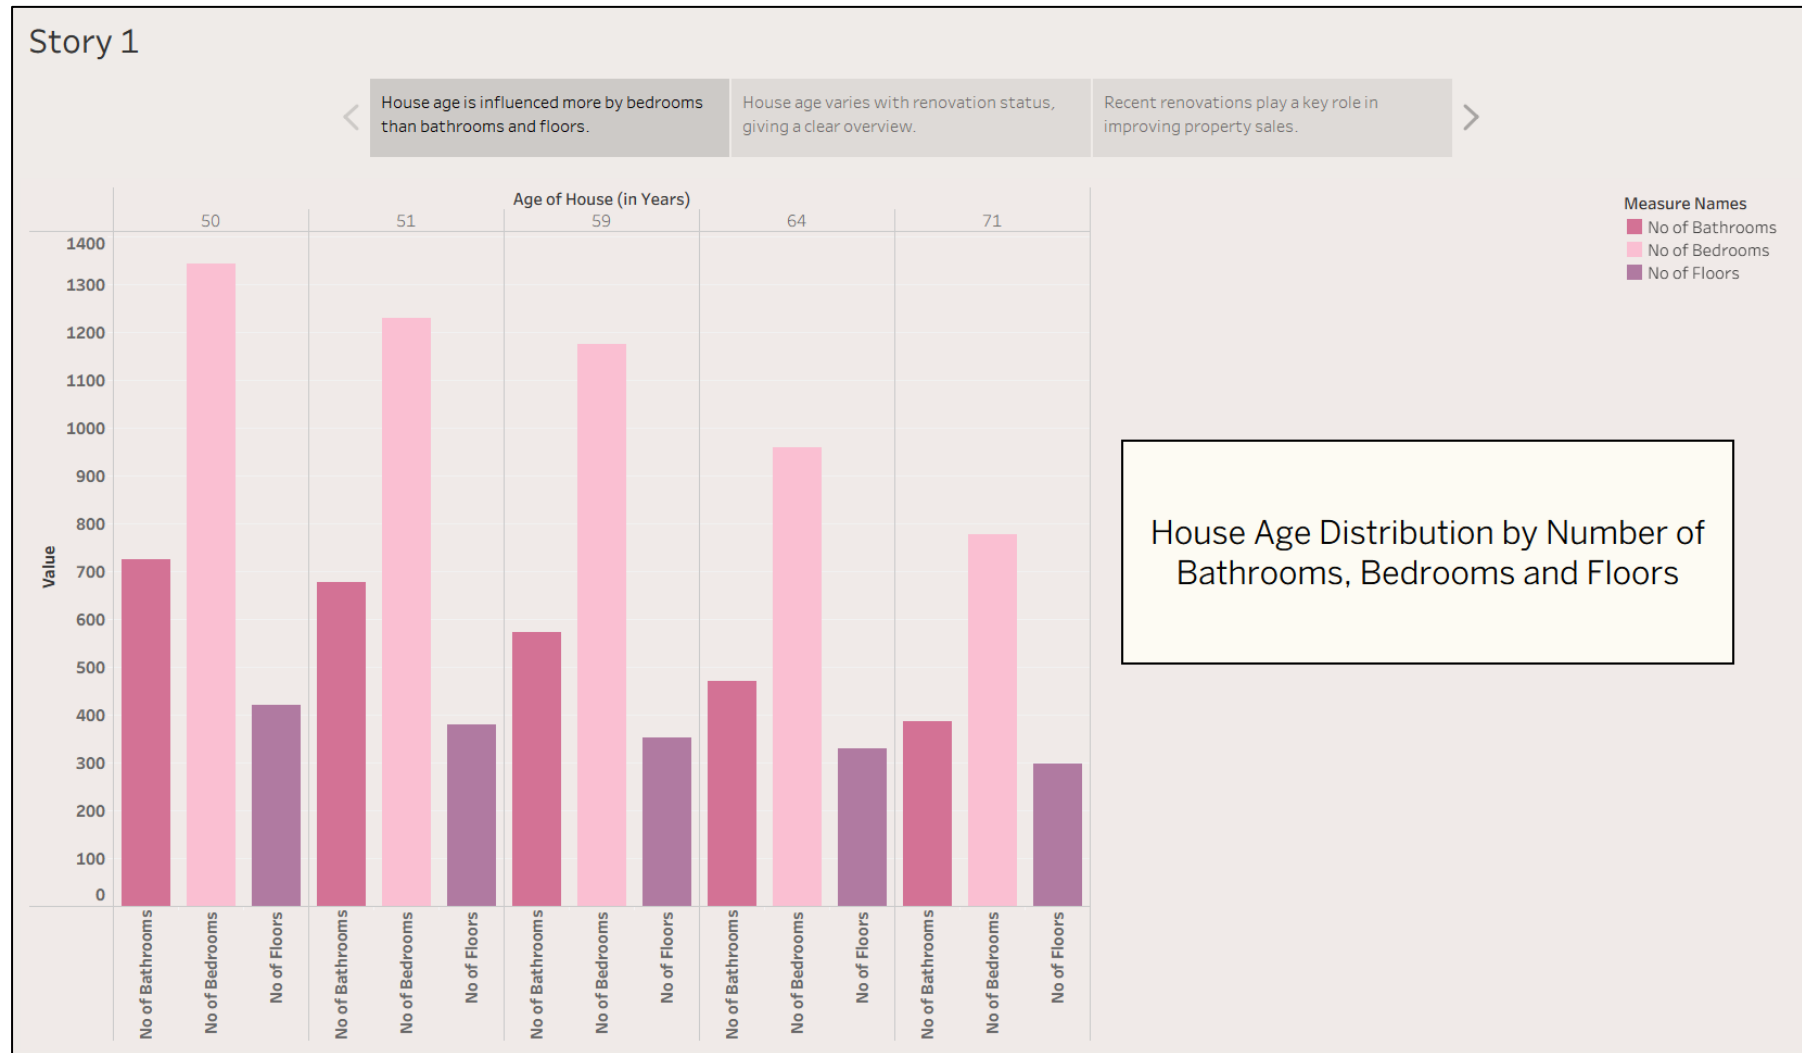

Figure 1: Comprehensive House Data Analysis Dashboard

The dashboard combines all six visualizations — KPI summary, renovation-based sales histogram, house age vs. renovation pie chart, and bedroom/bathroom/floor age bar chart — into a single interactive 2x2 view for quick, at-a-glance analysis.

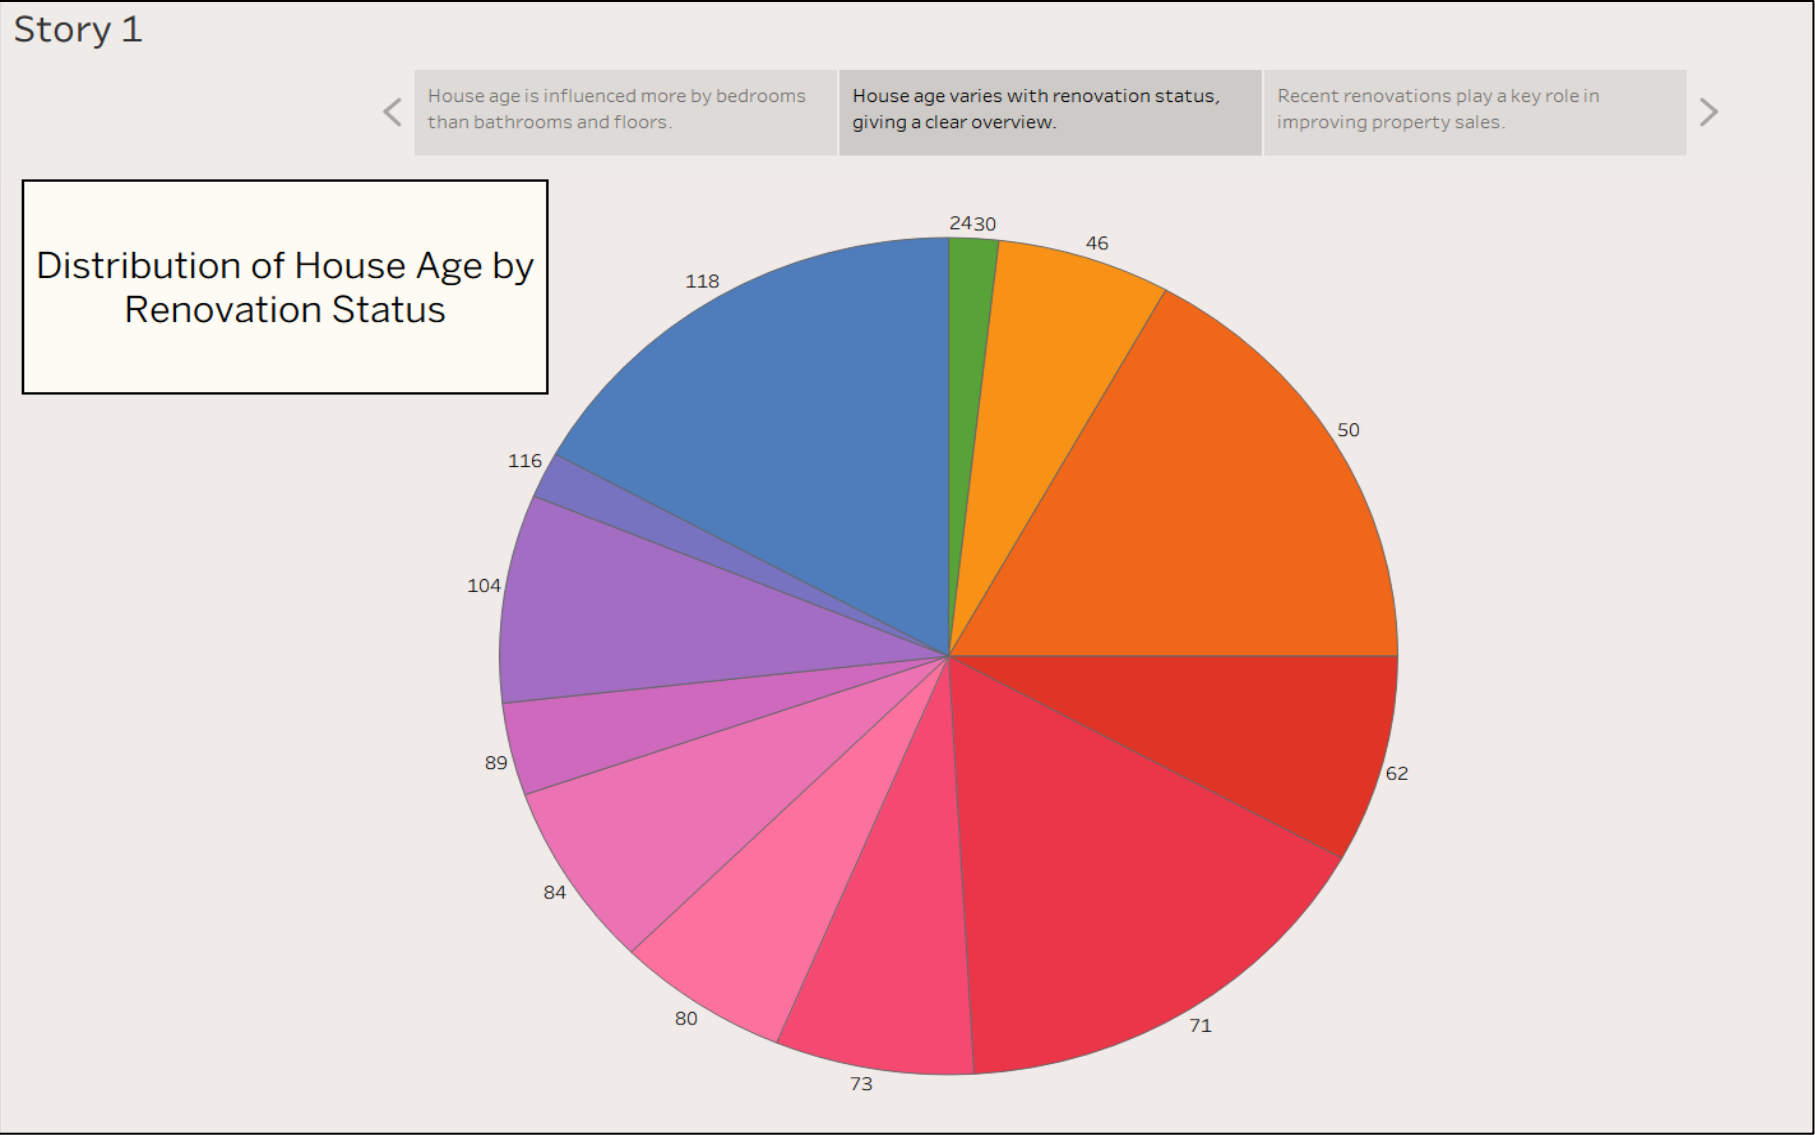

STORY BOARD

Figure 2: Story Point 1 – House Age Distribution by Number of Bathrooms, Bedrooms and Floors

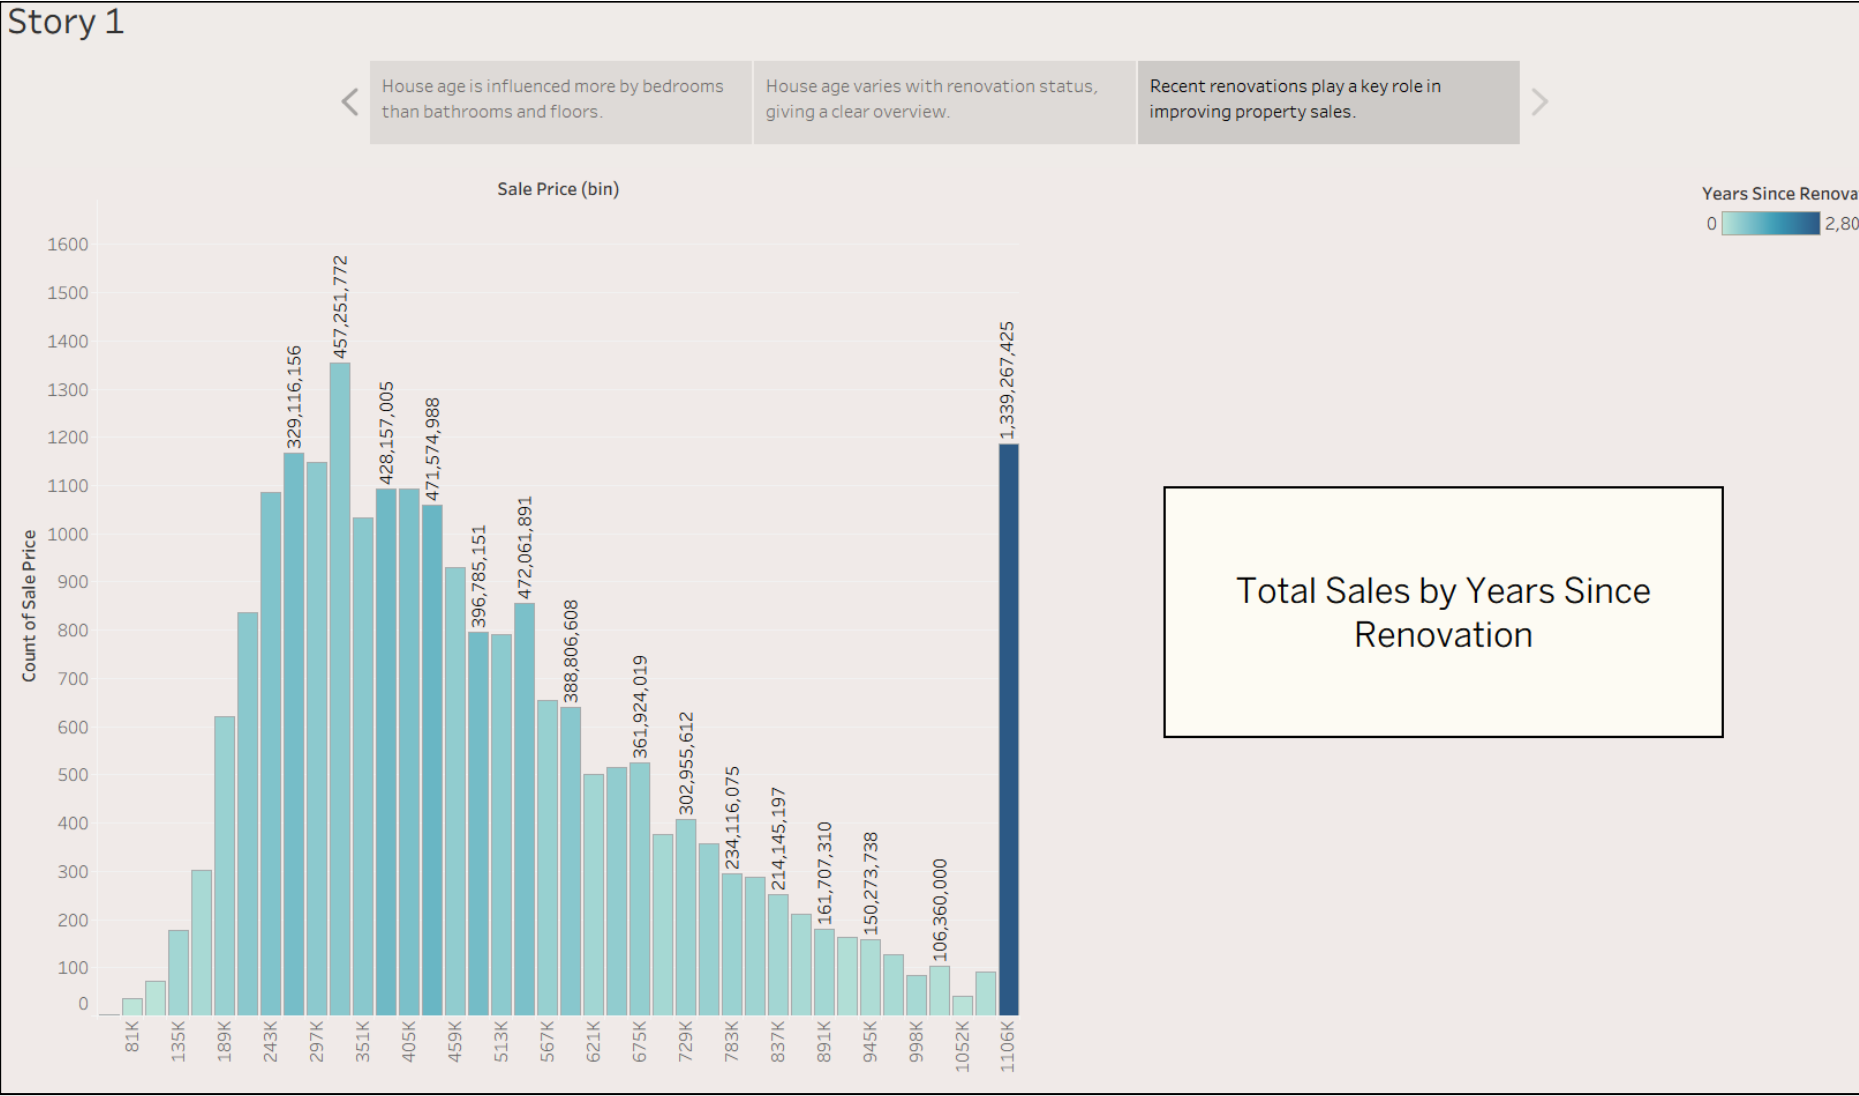

This story point highlights how house age varies across homes with different numbers of bathrooms, bedrooms, and floors. It helps identify whether older or newer homes tend to have larger or smaller configurations, giving insight into how housing layouts have evolved over time.

Figure 3: Story Point 2 – Distribution of House Age by Renovation Status

This story point shows how house age is distributed between renovated and non-renovated homes. It reveals whether renovation activity is more common among older homes or spread evenly across age groups, offering insight into how renovation trends relate to a property's age.

Figure 4: Story Point 3 – Total Sales by Years Since Renovation

This story point examines total house sales grouped by the number of years since renovation. It shows whether recently renovated homes sell in higher volumes compared to homes renovated further in the past, indicating how renovation recency may influence buyer interest.
