Project Name	Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau
Maximum Marks	

Scenario: A real estate analyst / stakeholder exploring the Housing Market Trends Tableau dashboard to make pricing and marketing decisions.

	Access Dashboard	Review KPIs	Analyze Visualizations	Review Story	Make Decisions
Experience steps	Opens the Tableau workbook / published dashboard link to view the housing analysis.	Scans KPI cards for record count, average sale price, and total basement area.	Filters and drills into charts on renovation impact, house age, and bedrooms/bathrooms/floors.	Walks through the guided Tableau story for a narrative summary of insights.	Applies insights to pricing, marketing, or investment decisions.
Interactions	Tableau Public / Desktop dashboard homepage.	KPI summary tiles on the dashboard.	Interactive Top-N filters and colour-coded charts.	Guided Tableau story, point by point.	Team discussions and shared reports/screenshots.
Goals & motivations	Help me get a quick snapshot of the housing dataset.	Help me understand what the headline numbers mean.	Help me find patterns worth acting on.	Help me see the big picture, not just isolated charts.	Help me act with confidence.

	Access Dashboard	Review KPIs	Analyze Visualizations	Review Story	Make Decisions
Positive moments	Dashboard loads quickly with a clean, uncluttered layout.	KPI cards make overall performance easy to grasp at a glance.	Filters reveal renovation and age patterns not obvious in raw data.	Story ties the numbers into a clear, easy-to-follow narrative.	Feels confident the decision is backed by real data.
Negative moments	Unsure where to start among several visualizations.	Some KPIs (e.g. basement area sum) lack context on their own.	Too many filter combinations can feel overwhelming.	Story can feel static if not paired with the live dashboard.	Hesitates to act without a second opinion or more recent data.
Areas of opportunity	Add a short "how to read this dashboard" note.	Add benchmark context next to each KPI card.	Suggest default filter presets for common questions.	Refresh the story with updated insights periodically.	Add exportable summary of key findings.
